

SKF Microlog Analyzer Accessories Catalog

Foreword

The SKF brand now stands for more than ever before, and means more to you as a valued customer.

While SKF maintains its leadership as the hallmark of quality bearings throughout the world, new dimensions in technical advances, product support and services have evolved SKF into a truly solutions-oriented supplier, creating greater value for customers.

These solutions encompass ways to bring greater productivity to customers, not only with breakthrough application-specific products, but also through leading-edge design simulation tools and consultancy services, plant asset efficiency maintenance programmes, and the industry's most advanced supply management techniques.

The SKF brand still stands for the very best in rolling bearings, but it now stands for much more.

SKF – the knowledge engineering company

Unmatched versatility, reliability and functionality have made the SKF Microlog Analyzer series of data collectors the premier choice for portable, handheld condition monitoring units.

Designed to help users establish or upgrade an existing condition monitoring program, SKF Microlog Analyzers handle the tasks required to perform predictive maintenance on rotating machinery in countless industries.

Data capture from a range of sources

SKF Microlog Analyzers automatically collect both dynamic (vibration) and static (process) measurements from almost any source, including handheld and magnetically mounted accelerometers, permanently mounted vibration sensors or on-line monitoring systems. Temperature measurements can be collected with a non-contact infrared sensor or with a contact probe.

State-of-the-art operating technology

With robust, high-speed data processors and optimum data storage capacity, SKF Microlog Analyzers are equipped to operate within today's most advanced computerized maintenance management systems. Units can be purchased with a range of individual modules and accessories for specific types of analysis required to meet their plant's monitoring needs.

Product compatibility

Every product listed in this catalog contains a legend that shows which SKF Microlog models are compatible with that product. An example of the legend is shown below. For example, a product that contains the legend below would be compatible with SKF Microlog models CMXA 48 and CMXA 80.

Example of compatibility legend

Note: The “CMXA 45/75-Z2” designation in the legend refers to both CMXA 45-Z2 and CMXA 75-Z2 ATEX Zone 2 certified models.

The “CMXA 48/80-Z2” designation in the legend refers to both CMXA 48-Z2 and CMXA 80-Z2 ATEX Zone 2 certified models.

SKF Microlog models

The accessories in this catalog are applicable to the following SKF Microlog models:

- **CMXA 44:** SKF Microlog Analyzer MX series
- **CMXA 45:** SKF Microlog Advisor Pro
- **CMXA 45-Z2:** SKF Microlog Advisor Pro, certified for use in ATEX Zone 2 hazardous areas
- **CMXA 48:** SKF Microlog Consultant
- **CMXA 48-Z2:** SKF Microlog Consultant, certified for use in ATEX Zone 2 hazardous areas
- **CMXA 51-IS:** SKF Microlog Analyzer, certified for use in intrinsically safe (IS) areas
- **CMXA 70:** SKF Microlog Analyzer GX series
- **CMXA 75:** SKF Microlog Analyzer GX series
- **CMXA 75-Z2:** SKF Microlog Analyzer GX series, certified for use in ATEX Zone 2 hazardous areas
- **CMXA 80:** SKF Microlog Analyzer AX series
- **CMXA 80-Z2:** SKF Microlog Analyzer AX series, certified for use in ATEX Zone 2 hazardous areas

Note: For use of accessories in hazardous areas, reference the product safety instructions. Accessories listed as compatible with the CMXA 45/75/48/80 models may also be used with the corresponding Z2 (ATEX Zone 2 certified) models in areas known to be **non-hazardous**. Please consult your site safety officer for clarification.

CMAC 4370-K

Triax accelerometer kit

SKF's triax accelerometer quickly and automatically measures horizontal, vertical and axial (triaxial) data with the press of a button. Triaxial measurements offer the user additional information on the condition of machinery, enabling a more complete diagnostic analysis. For example, measuring in a vertical direction often provides insight into how the shaft is restrained when considering bearing looseness. A horizontal orientation is preferred for bearing fault diagnosis and an axial measurement can provide clues as to the severity of shaft misalignment.

The SKF Microlog can acquire data simultaneously from all three axes. The triax accelerometer also enables measurement in any of the three axes where, in specialized cases, a single point accelerometer would be unable to measure data due to physical mounting restrictions or a difficult to access mounting surface.

For those who typically collect triaxial data, the sensor dramatically reduces data collection time. For users who up until now have collected only one data point per sensor location, triax offers the advantage of additional information for improved diagnostics. The triax accelerometer facilitates the efficient collection of accurate and repeatable machine data for enhanced decision making.

Specifications for triax accelerometer

Dynamic

- Sensitivity ($\pm 5\%$): 100 mVg
- Measurement range: 50 g, RMS
- Frequency range:
 - $\pm 5\%$: 0,5 to 3 000 Hz
 - $\pm 10\%$: 0,3 to 5 000 Hz
 - ± 3 dB: 0,2 to 10 000 Hz
- Amplitude non-linearity: $\pm 1\%$ full scale maximum
- Resonance frequency, mounted, nominal: 25 kHz
- Transverse sensitivity: $\leq 5\%$

Electrical

- Power requirements:
 - Voltage source*: 18 to 30 V DC
 - Constant current diode: 2 to 20 mA

* Do not apply power to this instrument without current limiting in the range of 20 mA maximum. To do so will immediately destroy the integral amplifier. It is suggested that only SKF approved power units be utilized for powering this instrument.

- Electrical noise: 0,0005 g, RMS
- Output impedance: 100 Ω
- Bias output voltage: 12 to 13 V DC
- Discharge time constant: 0,6 s
- Case ground isolation, signal/power ground pin to case: 10 M Ω

Environmental

- Temperature range: -55 to $+120$ $^{\circ}\text{C}$ (-65 to $+250$ $^{\circ}\text{F}$)
- Vibration limit: 1 000 g, RMS
- Shock limit: 2 000 g peak
- Base strain sensitivity: 0,001 g/ μ strain at 250/ μ Ω
- Thermal coefficient of sensitivity: 0,05%/ $^{\circ}\text{C}$ (0,03%/ $^{\circ}\text{F}$)

Physical

- Dimensions: See drawing
- Weight: 115 g (4.1 oz.)
- Mounting: Captive $\frac{1}{4}$ -28 mounting screw
- Case material: Aluminum alloy
- Sealing: Welded / glass to metal seal / O-rings, hermetic
- Connections:
 - Coaxial, radially mounted
 - Four pin MIL-C-26482, 8-4P
- Recommended magnetic base: CMSS 908-MD

Kit contents

- Triax accelerometer
- Anti-rotation pin mounted on the bottom surface of the sensor (the anti-rotation pin can be carefully un-threaded from the sensor so that it can be permanently mounted)
- CMAC 5009: Triaxial accelerometer cable
- CMAC 4300: Stud adapter

CMSS 2111

Small footprint accelerometer with integral cable

The CMSS 2111 is a small footprint accelerometer that includes an integrated 2 m (6.56 ft.) cable along with a magnetic mount. This accelerometer is capable of working to a depth of 5 m (16.4 ft.) (additional cable length required).

Specifications

Dynamic

- Sensitivity ($\pm 10\%$): 100 mVg

Physical

- Dimensions (hex \times height): 14 \times 64 mm (0.55 \times 2.52 in.)
- Weight (with cable): 99 g (3.5 oz.)
- Cable length: 2 m (6.56 ft.)
- Mounting: Magnet
- Case material: Stainless steel
- Cable type: Polyurethane
- Sealing: Molded
- Sensing element design: Ceramic, shear
- Connections:
 - Molded integral cable (top)
 - Fischer type 103 six pin

Ordering information

- **CMSS 2111** Small footprint accelerometer with an integrated cable and a magnetic mount.

CMSS 2114-K

High frequency accelerometer kit

The CMSS 2114-K is a high frequency accelerometer kit that includes a high frequency cable with an adhesive mounting base.

Specifications

Dynamic

- Sensitivity ($\pm 15\%$): 10 mVg
- Measurement range: ± 500 g peak
- Frequency range (± 3 dB): 5 to 60 000 Hz
- Non-linearity: $\leq 1\%$
- Resonance frequency: ≥ 95 kHz
- Transverse sensitivity: $\leq 5\%$

Electrical

- Power supply:
 - Voltage source: 18 to 30 V DC
 - Constant current diode: 2 to 20 mA
- Electrical noise:
 - Broadband:
 - 1 Hz to 10 kHz: 0,002 g RMS
 - Spectral:
 - 10 Hz: 160 $\mu\text{g}/\sqrt{\text{Hz}}$
 - 100 Hz: 40 $\mu\text{g}/\sqrt{\text{Hz}}$
 - 1 kHz: 15 $\mu\text{g}/\sqrt{\text{Hz}}$
 - 10 kHz: 10 $\mu\text{g}/\sqrt{\text{Hz}}$
- Output impedance: $\leq 100 \Omega$
- Bias output voltage: 8 to 12 V DC
- Discharge time constant: 0,02 to 0,06 s

Environmental

- Temperature range: -55 to $+120$ °C (-65 to $+250$ °F)
- Shock limit: 5 000 g peak
- Base strain sensitivity: $\leq 0,05$ g μ

Physical

- Dimensions: See drawing
- Weight: 6 g (0.2 oz.)
- Mounting thread: 10-32, male
- Mounting torque: 1,13 to 2,25 Nm (10 to 20 in. lbs.)
- Case material: Stainless steel
- Sealing: Welded hermetic
- Sensing element design: Ceramic, shear
- Connections: 5-44 coaxial (top)

Note: All specifications are at room temperature unless otherwise specified.

- CMXA 48
- CMXA 48/80-Z2
- CMXA 51-IS
- CMXA 70/44
- CMXA 75
- CMXA 80

Features

- Rugged, economical and all around general purpose sensor
- 100 mV/g sensitivity to optimize use in multiple applications
- Exceptional bias voltage (BV) stability at elevated temperatures
- Designed for exceptional low noise level over a wide temperature range
- Meets stringent CE, EMC requirements
- Low profile with captive mounting bolts ($\frac{1}{4}$ -28, M6 \times 1,00 or M8 \times 1,25) provided
- Corrosion resistant and hermetically sealed
- Reverse polarity wiring protection

Specifications

Dynamic

- Sensitivity: 100 mVg
- Sensitivity precision: $\pm 10\%$ at 25 °C (75 °F)
- Measurement range: 80 g peak
- Frequency range:
 - $\pm 10\%$: 1,0 to 5 000 Hz
 - ± 3 dB: 0,7 to 10 000 Hz
- Amplitude linearity: 1%
- Resonance frequency, mounted, minimum 22 kHz
- Transverse sensitivity: $\leq 5\%$ of axial

Electrical

- Power requirements:
 - Voltage source: 18 to 30 V DC
 - Constant current diode: 2 to 10 mA, recommended 4 mA
- Electrical noise: 2,0 Hz; 20 $\mu\text{g}/\sqrt{\text{Hz}}$
- Output impedance: $< 100 \Omega$
- Bias output voltage: 12 V DC
- Grounding: Case isolated, internally shielded

Environmental

- Temperature range: -50 to $+120$ °C (-60 to $+250$ °F)
- Vibration limit: 500 g peak
- Shock limit: 5 000 g peak
- Base strain sensitivity: 200 $\mu\text{g}/\mu\text{strain}$
- Electromagnetic sensitivity, equivalent g, maximum: 70 $\mu\text{g}/\text{gauss}$
- CE: According to the generic immunity standard for Industrial Environment EN50082-2
 - Acceptance criteria: The generated “false equivalent g level” under the above test conditions should be less than 2 mg measured peak to peak

Physical

- Dimensions: See drawing
- Weight: 145 g (5.1 oz.)
- Mounting: See ordering information
- Mounting torque: 3,4 Nm (30 in. lbs.)
- Case material: 316L stainless steel
- Sealing: Hermetic
- Connections:
 - Pin A: Signal/Power
 - Pin B: Common
 - Mating connector: CMSS 932-68LC or CMSS 932-68TL, two pin, IP 68, locking collar or twist lock
- Recommended cable: Two conductor, shielded, Teflon jacket, 100 pF/m (30 pF/ft.)
 - CMAC 5209, CMAC 5209-06S or CMAC 5209-10
- Recommended magnetic base: CMSS 908-MD

Note: Specifications conform to ISA-RP-37.2 (1 to 64) and are typical values referenced at 25 °C (75 °F), 24 V DC supply, 4 mA constant current and 100 Hz.

Note: This accelerometer is not recommended for use in hazardous environments.

CMSS 2210

Intrinsically safe (IS) industrial accelerometer

The CMSS 2210 industrial accelerometer is intrinsically safe and is ATEX and IECEx Group I and II approved.

Specifications

Dynamic

- Sensitivity ($\pm 10\%$): 100 mVg nominal at 80 Hz
- Frequency range: 2 Hz to 10 kHz $\pm 5\%$ (-3 dB at 0,8 Hz)
- Resonance frequency, mounted, nominal: 18 kHz
- Transverse sensitivity: $< 5\%$

Electrical

CMSS 908-MD

Medium duty magnetic base

The CMSS 908-MD is a multi-purpose magnetic base designed for industrial vibration monitoring applications. The low profile magnet has a 1/4-28 mounting hole to allow compatibility with SKF accelerometers and provides a solid mechanical connection to the machine.

Specifications

- Diameter: 35 mm (1.38 in.)
- Height: 19 mm (0.75 in.)
- Mounting hole: 1/4-28
- Pull strength: 23 kg (50 lbs.)

Accelerometer compatibility

The CMSS 908-MD medium duty magnetic base is compatible with the following accelerometers:

- CMAC 4370: Triax accelerometer
- CMSS 2200 / CMSS 2200-M8: General purpose, low profile, side exit industrial accelerometer
- CMSS 2210: Intrinsically safe (IS) industrial accelerometer
- CMSS 793-CA: CSA approved, general purpose industrial accelerometer
- CMSS 793-EE: ATEX approved, intrinsically safe (IS), general purpose industrial accelerometer

CMAC 5009

Triaxial accelerometer coiled cable

The CMAC 5009 coiled cable connects to the SKF Microlog CH1 input connector at one end and to a triaxial accelerometer at the other end. The cable is recommended for use with the CMAC 4370-K triax accelerometer kit.

CMAC 5079

Splitter, four channel straight cable

The CMAC 5079 cable is used for connecting to either CH1 or CH2 on the CMXA 80 and CMXA 48. If connected to CH1, lead A gives channel 1 and lead B gives channel 4. If connected to CH2, lead A gives channel 2 and lead B gives channel 3.

Specifications

- Connectors: Two Fischer type 103 six pin female sockets to one Fischer type 103 six pin male
- Length: 45 cm (1.5 ft.) straight

Note: Two cables are required to collect four channel measurements

Note: For CMXA 45 and CMXA 75, this cable can be used in CH2 only to give three single axis simultaneous accelerometer inputs. A single accelerometer is connected to CH1 giving channel 1, then the cable into CH2 giving the same inputs as for CH2 of the CMXA 80.

CMAC 5209-06S

Accelerometer coiled cable with safety breakaway

The CMAC 5209-06S coiled accelerometer cable is similar to the CMAC 5209 cable, but also includes a safety breakaway.

CMAC 5211

BNC tachometer straight cable

The CMAC 5211 cable connects to the power connector at one end (using the power connector's tachometer input pin) and to any male BNC connector on the other end. It can be used with any tachometer signal source that does not require the SKF Microlog to power it.

Note: The CMSS 6195 Laser Reference Kit (CMVA version kit) or CMSS 6155 Optical Phase Reference Kit (CMVA 60 version kit) requires a CMAC 5211 BNC tachometer cable to work with the SKF Microlog.

Specifications

- Connectors: Fischer type 103 seven pin trigger I/P to BNC
- Length: 1 m (3.28 ft.) straight

Ordering information

- CMAC 5211 BNC tachometer straight cable.

CMAC 5213

Laser tachometer kit straight cable, 24 cm (9.5 in.)

The CMAC 5213 laser tachometer cable connects the tachometer to the SKF Microlog.

The CMAC 5213 cable is a shorter cable than is sold in the CMAC 5030K laser tachometer kit. This cable is only 24 cm (9.5 in.) long. This shorter cable is preferred if the user uses the CMAC 5030K kit's mounting bracket to attach the tachometer directly to the SKF Microlog.

CMAC 5214

Laser tachometer kit straight cable, 2 m (6.56 ft.) for CMAC 5030K

The CMAC 5214 laser tachometer cable connects the tachometer to the SKF Microlog.

The CMAC 5214 cable, which is also included in the CMAC 5030K and CMAC 5030K-Z2 laser tachometer kits, allows the user to place the tachometer on a stationary surface up to 2 m (6.56 ft.) away from the SKF Microlog.

Specifications

- Connectors: Fischer type 103 seven pin to four pin socket

CMAC 3715

Cable converter, two pin MIL to BNC

The CMAC 3715 adapter, when combined with the CMAC 5209 accelerometer cable, allows the SKF Microlog to connect to any male BNC connector. This is useful for reading buffered outputs from protection systems, switch boxes or process signal sources.

The adapter does not block DC signals, so the user must be careful to avoid applying power to a buffered signal output.

- Length: 1 m (3 ft.) straight

Ordering information

- **CMAC 5023** Signal input straight cable.

CMAC 5032

Power/Trigger splitter straight cable

The CMAC 5032 cable allows the connection of the tachometer, instrument power and USB communications (via the CMAC 5095 cable) simultaneously.

Specifications

CMAC 5201

Serial communication cable

The CMAC 5201 cable has nine pins (female at both ends) that all connect straight through. It is required for uploading/downloading data between the host computer and the SKF Microlog.

For uploading to laptop computers with a USB connection, there is no USB to Serial cable available from SKF; however, an after-market USB adapter may be purchased at most electronics stores or via the web.

CMAC 4200-K-SL

Infrared thermometer

The SKF CMAC 4200-K-SL infrared thermometer with laser sighting is a rugged, easy to use, portable, non-contact thermometer. Ideal for a broad range of maintenance tasks, the CMAC 4200-K-SL may be connected directly to the SKF Microlog series analyzers for quick, accurate recording of surface temperatures. It is one of a variety of accessories offered by SKF to work with the SKF Microlog in enhancing the overall effectiveness of a predictive maintenance program.

The CMAC 4200-K-SL measures the amount of infrared energy emitted by an object and converts it to a display of the object's surface temperature. The handheld, infrared thermometer takes non-contact temperature measurement technology to a new level.

Features

- Designed for physically challenging environments
- Easy to use
- Adjustable emissivity with on-board table
- Fast response time
- Accuracy $\pm 1\%$ of reading
- Wide temperature range

Graphic display

View more information at a glance. The CMAC 4200-K-SL infrared thermometer automatically creates a graphic display of the last 10 temperature points measured using the maximum and minimum temperature values to establish the range.

Laser tachometer kit

The CMAC 5030K laser tachometer kit contains a small tachometer for easy mounting. Along with the tachometer, this kit includes a bracket for mounting the tachometer directly to the SKF Microlog using the camera mount located on the bottom of the SKF Microlog. The kit also includes a two-meter cable to connect the tachometer to the SKF Microlog and a small tripod for a stationary mounting of the tachometer during the measurement. The key features of this laser tachometer kit include:

- Operating frequency up to 250 000 r/min
- Long optical range, up to 2 m (6.56 ft.)
- Wide angle of operation, up to 80°
- On target indicator standard
- Protection rating: IP 67

Specifications

- Material: Stainless steel body
- Color: Silver
- Laser type: Class 2
- Optical range: 100 to 2 000 mm (0.33 to 6.56 ft.)
- Power: 1 mW maximum
- Current consumption: 45 mA maximum
- Cable: Fischer seven pin type 103 to four pin socket, 2 m (6.56 ft.)
- Wavelength: 635 mm (25 in.)
- Angle of incidence: ±80°
- Speed range: 0,1 to 250 000 r/min
- Power input: 5 V DC or 8-24 V DC versions at 30 mA typically
- Operating temperature: -10 to +40 °C (15 to 105 °F)
- IP rating: IP 67
- Housing types: M20 threaded or plain body plus fixing slots
- Connections: Integral connector
- Dimensions: 70 × 20 mm (2.76 × 0.79 in.)

CMAC 5030K-Z2

Laser tachometer kit – ATEX certified

The CMAC 5030K-Z2 laser tachometer kit contains a small tachometer that is ATEX certified; the sensor is designed for use in hazardous areas with certified hazardous area equipment. This kit is primarily designed for phase-related rotational speed applications, including very high speed monitoring.

Along with the tachometer, this kit includes a bracket for mounting the tachometer directly to the SKF Microlog using the camera mount located on the bottom of the SKF Microlog. The kit also includes a two-meter cable to connect the tachometer to the SKF Microlog and a small tripod for a stationary mounting of the tachometer during the measurement. The key features of this laser tachometer kit include:

- Tachometer is ATEX certified
- Operating frequency up to 250 000 r/min
- Long optical range, up to 2 m (6.56 ft.)
- Wide angle of operation, up to 80°
- On target indicator standard
- Protection rating: IP 67

Modal analysis hammer kit

Features

- Frequency range up to 8 kHz
- Peak force 2 200 N (500 lb. ft.)
- Output 2,25 mV/N (10 mV/lb. ft.)
- Mass extender to provide additional force

These calibrated modal hammer kits may be used for impulse testing of the dynamic behavior of mechanical structures by striking the object with the hammer and measuring the resulting response with the accelerometer. The hammer imparts a constant force over a broad frequency range, which depends on the type of tip used.

The hammer has an integral, constant current quartz force sensor mounted on the striking end of the hammer head. The sensor converts the impact force into electrical signal for display and analysis.

It is designed with rigid quartz crystals and a built-in, microelectronic, unity gain amplifier. Due to the laser-welded construction of the sensor element, operation is reliable in adverse environments.

The striking end of the hammer has a threaded hole for installation of a variety of impact tips that are included in the kit. The tip transfers the impact force to the sensor and protects the sensor face from damage. Tips of different stiffness allow the variation of the pulse width and correspondingly the frequency content of the force.

Modal analysis and modeling is also available by fixing the accelerometer at one location, impacting the structure at one point and then moving the accelerometer to other points of interest. When used with the FRF module, the following modal parameters can be calculated and displayed:

- Apparent mass / accelerance
- Impedance/Mobility
- Stiffness/Compliance

Kit contents

The CMAC 5056 and CMAC 5057 hammer kits each contain an accelerometer, while the CMAC 5058 hammer kit does not. The CMAC 5056 hammer kit can be used on structures with a mass of 210 g (7.6 oz.) and above. The CMAC 5057 hammer kit can be used on structures with a mass of 56 g (2 oz.) and above.

The accelerometers that are included with the CMAC 5056 and CMAC 5057 kits are constant current, low impedance, voltage-mode sensors. Microelectronic, built-in amplifiers standardize sensitivities within a few percent of nominal value.

CMAC 5056 / CMAC 5057 / CMAC 5058 kits include

- Calibrated hammer
- Cable – BNC to Fischer six pin (for a sturdier cable, CMAC 5088 may be used)
- Red hammer tips (two)

CMAC 5208

AC/DC current clamp

The CMAC 5208 AC/DC current clamp is a battery-powered clamp-on current probe that is used on primary circuits with the SKF Microlog Analyzer to measure AC or DC currents up to 600 A peak AC, 600 A DC.

Features

- Solid state hall effect transducer
- AC (1 Hz to 5 kHz) and DC (0 to 1 Hz) measurement
- Ranges: 60 and 600 A
- Degaussing adjustment for zero noise offset

The AC/DC current clamp allows a user to easily and safely incorporate current monitoring within SKF Microlog routes. The jaws clamp around a conductor allowing current measurements without breaking the circuit. A Hall Sensor mounted in a gap in the core senses the magnetic field produced by the current being measured. An amplifier circuit generates an output signal of 1 mV/A (600 A range) or 10 mV/A (60 A range). Demagnetizing (degaussing) is accomplished by means of a push-button.

Lightweight and easy to carry, the AC/DC current clamp may be used throughout the plant or in control room environments. This current clamp is equipped with a connector that fits the CH1 or CH2 input connectors.

CMCP 850-01 / CMCP 850-02 / CMCP 850-03

SKF Microlog Analyzer field balancing accessory kit

Features

- Two accelerometers with magnetic bases
- Choice of optical or laser phase reference kit
- 7,6 m (25 ft.) cables
- Precision electronic balance scale
- Large trial weight kit
- Packaged in a rugged, watertight, hard carrying case

The SKF Microlog Analyzer field balancing accessory kit contains all of the accessories necessary to perform in-place field balancing of rotating machinery. This is a complete kit that provides the necessary transducers, magnetic bases, A/B switch, cables, trial weight kit, precision electronic balance scale, and more, all packaged in a rugged, watertight, hard case that makes balancing easier and more accurate. With the flip of a switch, two channels of vibration data can be input into the SKF Microlog. This eliminates the need to keep moving the vibration sensor back and forth between balance planes. A variety of adapters are included so that you can hook the SKF Microlog to other sensor sources, such as on-line systems and velocity probes.

The CMCP 850 is a complete kit for the SKF Microlog. In short, all you need to add is an SKF Microlog and you are ready to balance pumps, fans, motors, couplings, small turbines and more.

Field balancing kits are available with either the optical or laser phase kits or a laser tachometer kit.

CMSS 6155XK-U-CE

Optical phase reference kit

The CMSS 6155XK-U-CE optical phase reference kit allows you to easily monitor speed and phase angles on any operating machine by triggering off of reflective tape or paint on the shaft surface. The optical phase reference system can measure speed and provide a trigger for absolute and relative phase measurements at distances up to 0,9 m (3 ft.).

The purpose of phase measurement

The angular distance between a reference location on a rotating shaft and some point defined on the shaft's vibration waveform (such as the high spot or heavy spot) is commonly called the phase angle. Phase angle is measured for four main reasons:

- Balancing, to locate the proper position on an unbalanced rotor for adding a compensating weight
- Startup and coast down response, to define critical speeds and to assess system damping
- Detecting changes in operating balance, to indicate problems such as changing electrical properties, fan build up and shaft cracks
- Detecting shaft misalignment, resonance and other machinery problems

Methods for establishing a phase reference

Phase angle measurement requires two inputs: a reference pulse triggered once each revolution and a vibration signal. The SKF Microlog triggers off a positive-going or negative-going V DC pulse, depending on how it is configured in the Trigger Slope polarity setting (+ or -) in Trigger Setup.

The once-per-revolution reference pulse required by the SKF Microlog is provided by a non-contact optical sensing system that produces a TTL pulse (5 to 0 V DC) when reflective tape or paint installed on the rotating shaft passes through the sensor's light beam, up to a maximum distance of 0,9 m (3 ft.).

The phase angle measuring process

The optical phase reference sensor systems for the SKF Microlog sense machinery speed and output a TTL signal synchronous with machine speed. This output signal is used by the SKF Microlog to measure the absolute phase of a vibration signal.

The phase angle measuring process works by aiming the sensor's light beam, using the optical phase reference sensor, at the reference mark on the rotating shaft. This establishes the zero phase reference relative to the vibration signal component. The vibration transducer produces a complex vibration signal for the process. The optical phase reference sensor sends out a phase reference signal to the SKF Microlog that is synchronous with the shaft speed. The SKF Microlog then reports the magnitude of the vibration component and its phase angle in relation to the vibration transducer.

Interface module

The interface module provides an interface between the optical phase reference sensor and the SKF Microlog. It also provides power to the sensor. The optical phase reference sensor can typically operate for 40 hours continuously using the interface module's internal rechargeable batteries, or indefinitely from the external recharger / power supply (when connected to the interface module).

Features

- Single pulse per revolution TTL trigger source
- Positive and negative pulse outputs
- Self-contained
- Rechargeable batteries
- Green LED on optical sensor indicates "ON" target operation
- Remote wake-up (with Wireless Monitoring System V/T)

The optical phase reference kit consists of a remote optical sensor equipped with a steady state DC light source and photo detector, an interface module, on-off switch, BNC connectors, internal rechargeable batteries and a recharger input. A universal plug-in charger module is also supplied. Standard camera tripods, user-supplied mounting brackets or the optional magnetic holder with movable arm (CMSS 6156) may be used for mounting.

Specifications

Interface module

- Power source: Four rechargeable Nickel Metal Hydride NiMH AA batteries provide up to 40 hours of continuous operation; complete recharge requires four hours
- Output signals:
 - TTL positive inverting pulse: 0 to 5 V
 - TTL negative non-inverting pulse: 5 to 0 V – switch selectable
- Bandwidth: 0 to 100 kHz
- Output connectors: BNC connector (female)
- Pulse width: Determined by size of reflective marker and rotational speed of equipment being monitored
- Operating temperature: 0 to 50 °C (30 to 120 °F)
- Weight: 235 g (8.3 oz.)
- Dimensions: 127 × 64 × 25 mm (5.0 × 2.5 × 1.0 in.)

Remote optical sensor

- Speed range: 1 to 250 000 r/min
- Operating envelope: Up to 0,9 m (3 ft.) and 45° from reflective target
- Illumination source: Visible red LED, 5 V DC at 30 mA
- Output signal: 5 to 0V DC TTL compatible pulse
- On-target indicator: Green LED on end cap
- Material: 303 stainless steel
- Lens: Acrylic plastic
- Cable length: 2,4 m (8 ft.) from sensor to interface module
- Operating temperature: –10 to +70 °C (15 to 160 °F)
- Dimensions: Threaded tube – M16 × 1,5 mm length × 74 mm diameter (2.9 in. length × 0.625 in. diameter) supplied with two M16 jam nuts and mounting bracket

CMSS 6156

Optical phase reference magnetic holder

The CMSS 6156 optical phase reference holder with magnetic base is designed for use with the CMAC 5030K laser tachometer kit. It is a magnetic holder with a movable arm and remote optical sensor attachment hardware.

Specifications

- Measurements:
 - Magnetic base: 62 × 50 × 55 mm (2.44 × 1.97 × 2.17 in.)
 - Height: 240 mm (9.45 in.)
- Clamping force: 780 N
- Accessory mounting: 355,6 mm (14 in.) camera type stud

Compatibility

The CMSS 6156 optical phase reference magnetic holder is compatible with the following kits:

CMSS 6165K-AX

Strobe light kit

The CMSS 6165 is a truly portable, battery-operated stroboscope that is suited for a wide range of industrial applications and is able to interface with the SKF Microlog CMXA series.

Sturdy and compact, the strobe can be operated anywhere in the plant or field to permit visual inspection (freeze motion), phase shift studies and digital measurement of rotary, reciprocating or linear motion of various equipment while it is in operation. The CMSS 6165 strobe light has a special "tuning" circuit that allows it to track vibration transducer (accelerometer) signals. This capability makes it different from general purpose strobe lights. It also has a narrow and wide bandwidth filter selection to discriminate fundamentals from harmonics. The narrow bandwidth filter limits the influence of harmonics around the selected frequency, providing a more stable phase reading.

The CMSS 6165 requires an input signal to synchronize the flash rate with an external source, typically a vibration transducer in the tracking mode or optical pickup in the external mode. Using a cable, this signal is applied to the input jack connector on the side of the strobe light. The CMSS 6165 generates a tachometer signal available on the output jack. The CMSS 6165K-AX strobe light kit is ideally suited for:

- Balancing
- Inspection of high speed rotating parts
- Motion analysis or phase shift measurement
- Over-speed trip tests
- On line coupling inspections
- r/min / r/sec measurements
- All applications suited to a general purpose, phase shifting stroboscope

Specifications

- Time base: Ultra stable crystal oscillator
- Display: LCD with six numeric digits 12,7 mm (0.5 in.) high
- Indicators: Battery level, on target, TIME, AUTO, ALT, TACH, LOCK and EXT icons
- Knob adjustment: Digital rotary switch with 36 detents per revolution; velocity sensitive
- Memory: Last setting before power down is remembered and restored on next power up; nine user flash rates can be set
- Output pulse: 40 microseconds positive/negative pulse (menu selectable), 3,3 V DC typical
- Input power: Internal rechargeable batteries 6 V DC, external AC recharger (115 to 230 V AC)

- Light output:
 - Average: 11 W at 3 000 flashes per minute, > 13 W above 3 450 flashes per minute
 - Instantaneous (per flash): 230 mJoule typical to 3 450 flashes per minute
- Flash duration: 10 to 25 microseconds (auto adjust with flash rate)
- Flash tube (lamp) life: 100 million flashes
- Run time: Two hours typical at 1 800 flashes per minute and over one hour at 6 000 flashes per minute with fully charged batteries
- Charge time: Four to five hours typical with PSC-pbxU
- Weight: 0,8505 kg (1.875 lbs.) including batteries

This product is designed to be safe for indoor use under the following conditions (per IEC61010-1):

- Operating temperature*: 0 to 40 °C (30 to 105 °F)
- Humidity: Maximum relative humidity 80% for temperatures up to 30 °C (90 °F), decreasing linearly to 50% relative humidity at 40 °C (105 °F)
- Flash range: 30 to 50 000 flashes per minute
- Tachometer measurements: 5 to 250 000 r/min
- Tracking filter: Selectable wide and narrow bandwidths; the filter may not lock below 100 flashes per minute
- External input: 10 or 100 mVg accelerometer (powered by an analyzer or by the strobe, menu selectable)

* Safety thermal feature will set unit into TACH Mode (stops flashing) in the event of internal overheating.

Note: The CMSS 6165 strobe light is not approved for use in hazardous locations.

CMAC 5090

Universal power supply (non-IS)

The CMAC 5090 universal power supply is used for connecting the docking station to the power cord. This power adapter delivers power to the SKF Microlog while charging the battery when inside the instrument. It also features a connector to mate with the USB/splitter cable (CMAC 5095) or the docking station (CMAC 5068). Since this universal power supply can support 100 to 240 V input, it also comes with USA, UK, AUS and EURO adapter plugs.

CMAC 5403

Audio headset, hard hat compatible

The CMAC 5403 audio headset connects to the SKF Microlog and allows users to listen to the audio output as an aid to machinery diagnostics (such as with the Idler Sound Monitor). The headphones are high quality and industrial grade. Special earpiece cups reduce surrounding noise and are softly molded to provide comfort during extended wear. The adjustable fabric head strap and neck band are designed for environments where a hard hat must be worn. The audio connection includes a standard 3,5 mm (0.14 in.) jack plug.

Note: To use the audio headset, the CMAC 5078 audio headphone cable is required.

CMAC 5091

Microphone with preamplifier

The CMAC 5091 is a high frequency microphone used with the idler sound monitor. The constant current microphone enables acoustic type monitoring and is designed with a preamplifier.

The microphone is housed within the CMAC 5141 parabolic reflector and connected to the SKF Microlog via the CMAC 5093 microphone cable (CMAC 5141 and CMAC 5093 are sold separately).

When used with the parabolic reflector, the microphone can detect faulty idlers from up to 3 m (10 ft.) away.

Note: Refer to **page 54** for specifications on the microphone.

Note: The CMAC 5091 microphone is the same microphone as supplied with the CMAC 5084 microphone kit. The CMAC 5091 is sold separately as a replacement microphone for the idler sound monitor kit.

CMAC 5141

Parabolic reflector

The CMAC 5141 parabolic reflector is an impact resistant case that holds the CMAC 5091 microphone. The parabolic reflector focuses sounds to the microphone and protects the microphone from damage.

The parabolic reflector can either be held in the hand or attached to the SKF Microlog via the optional CMAC 5142 adapter plate (for models CMXA 45 and CMXA 75 only).

When used with the high frequency microphone, faulty idlers can be detected from up to 3 m (10 ft.) away.

On windy days, an optional wind jammer (CMAC 5143) can be fit over the parabolic reflector to reduce wind noise.

CMAC 5142

Adapter plate

The CMAC 5142 adapter plate (with locking screw) is used to attach the CMAC 5141 parabolic reflector to the back of the SKF Microlog (models CMXA 45 and CMXA 75 only).

With the adapter plate attached to the back of the SKF Microlog, the included velcro strap neatly holds the CMAC 5093 cable in place.

CMAC 5143

Wind jammer

The CMAC 5143 wind jammer is used to reduce wind noise that the microphone may pick up. With its integrated elastic band, the wind jammer stretches over the CMAC 5141 parabolic reflector until snug.

SKF spindle assessment accessories

CMAC 5121 / CMAC 5122

Pull force gauges

Pull force gauges are compact measuring devices used to check the force of the tool being pulled into the spindle taper. The specified pull force is very important for the quality of machining. Using the pull force gauge in preventive maintenance schedules will allow you to notice a reduction of the pull force and prevent problems before they occur. The pull force gauge minimizes the down times for your machines. Two different gauges are available:

- CMAC 5121: Measures pull force from 2,5 to 20,0 kN
- CMAC 5122: Measures pull force from 10,0 to 75,0 kN

Conventional gauges measure in accordance to the nominal component dimension. The manufacturing related tolerance range of the components could cause a false measuring result. CMAC 5121 and CMAC 5122 offer the possibility to take these tolerances into consideration during the measuring process.

All SK work holders from SK30 to SK60 (DIN/ISO/ANSI) and all HSK work holders according to DIN 69893 (HSK-A 32/B 40 to HSK-A 125/B 160) can be used.

Features

- Suitable for all types of clamping systems, regardless of manufacturer
- Exchanging adapters can be used for all tapered standards and sizes (SK, ANSI, BT, MAS, HSK, CAPTO and special standards)
- The system is light, compact, very easy to use and suitable for difficult space conditions
- The measured force is easily read on the LED display in kN, even in difficult lighting conditions
- Power supply includes a standard 9 V DC battery (Auto/Power/Off)
- Gripping channel for automatic changing and positioning in the tool magazine
- Automatic mode activates the pull force gauge by itself during the tool changing
- Adjustable tolerance range to simulate the range of the tool/spindle (± 1 mm increments)
- Energy saving mode for long battery duration
- Internal memory stores up to 8 000 measurements (machine ID, date, time, pull force, adjusted range)
- USB connection to download the internal memory and charge the integrated battery
- Operating temperature range between 15 to 35 °C (60 to 95 °F)
- Maximum weight: 1,5 kg (3.3 lb.)

If the pull force falls below a specified value that will eventually occur due to mechanical fatigue (e.g., spring wear, breakage, etc.), then one or more of the following will result:

- Tool wear will significantly increase
- The tool vibrates and leaves a bad surface finish
- Fretting occurs in the spindle taper and tool holders
- Unexpected tool breakage
- Reduced tool life
- Safety of the machine operator is at risk

Early preventive actions can be taken to avoid unnecessary machine shut down and to avoid a number of other problems that cannot be defined (e.g., excessive tool wear, loss of tool life and tool breakage).

Accessories are available to extend the Spindle Assessment kit utilization and to maximize the utilization of the Spindle Test module firmware.

Pull force gauge taper rings

The CMAC 5123, CMAC 5124 and CMAC 5125 taper rings are used with the CMAC 5121 or CMAC 5122 pull force gauge. These different sized taper rings can be interchanged based on the size needed. The different sizes of taper rings available are as follows:

- CMAC 5123: SK30 (ISO/MAS)
- CMAC 5124: SK40 (ISO/MAS)
- CMAC 5125: SK50 (ISO/MAS)

These taper rings are used with the corresponding ISO and MAS adapters (CMAC 5126 through CMAC 5130). Accessories are available to extend the Spindle Assessment kit utilization and to maximize the utilization of the Spindle Test module firmware.

CMAC 5137

Run-out gauge

The CMAC 5137 analog run-out gauge (vipp indicator) is used together with the universal magnetic foot to measure tool nose run-out in the Spindle Assessment kit and the Spindle Test module.

The run-out gauge can measure in both directions and can enable to turn the outer ring for a zero setting.

CMAC 5137 includes an adapter for an 8 mm fixture and also includes a carrying case.

CMAC 5139 / CMAC 5140

Belt tension gauge

The CMAC 5139 and CMAC 5140 belt tension gauges are used to measure belt tension. By pressing the mechanical gauge on the belt, it indicates the belt tension value. It verifies the result together in the Spindle Assessment kit and the Spindle Test module.

CMAC 5139 is used to measure belt tension between 70 and 150 N (*between 51.6 and 110.6 ft. lb.*).

CMAC 5140 is used to measure belt tension between 150 and 600 N (*between 110.6 and 442.5 ft. lb.*).

SKF – the knowledge engineering company

From the company that invented the self-aligning ball bearing more than 100 years ago, SKF has evolved into a knowledge engineering company that is able to draw on five technology platforms to create unique solutions for its customers. These platforms include bearings, bearing units and seals, of course, but extend to other areas including: lubricants and lubrication systems, critical for long bearing life in many applications; mechatronics that combine mechanical and electronics knowledge into systems for more effective linear motion and sensorized solutions; and a full range of services, from design and logistics support to condition monitoring and reliability systems.

Though the scope has broadened, SKF continues to maintain the world's leadership in the design, manufacture and marketing of rolling bearings, as well as complementary products such as radial seals. SKF also holds an increasingly important position in the market for linear motion products, high-precision aerospace bearings, machine tool spindles and plant maintenance services.

The SKF Group is globally certified to ISO 14001, the international standard for environmental management, as well as OHSAS 18001, the health and safety management standard. Individual divisions have been approved for quality certification in accordance with ISO 9001 and other customer specific requirements.

With over 120 manufacturing sites worldwide and sales companies in 70 countries, SKF is a truly international corporation. In addition, our distributors and dealers in some 15 000 locations around the world, an e-business marketplace and a global distribution system put SKF close to customers for the supply of both products and services. In essence, SKF solutions are available wherever and whenever customers need them. Overall, the SKF brand and the corporation are stronger than ever. As the knowledge engineering company, we stand ready to serve you with world-class product competencies, intellectual resources, and the vision to help you succeed.

Evolving by-wire technology

SKF has a unique expertise in the fast-growing by-wire technology, from fly-by-wire, to drive-by-wire, to work-by-wire. SKF pioneered practical fly-by-wire technology and is a close working partner with all aerospace industry leaders. As an example, virtually all aircraft of the Airbus design use SKF by-wire systems for cockpit flight control.

SKF is also a leader in automotive by-wire technology, and has partnered with automotive engineers to develop two concept cars, which employ SKF mechatronics for steering and braking. Further by-wire development has led SKF to produce an all-electric forklift truck, which uses mechatronics rather than hydraulics for all controls.

Harnessing wind power

The growing industry of wind-generated electric power provides a source of clean, green electricity. SKF is working closely with global industry leaders to develop efficient and trouble-free turbines, providing a wide range of large, highly specialized bearings and condition monitoring systems to extend equipment life of wind farms located in even the most remote and inhospitable environments.

Working in extreme environments

In frigid winters, especially in northern countries, extreme sub-zero temperatures can cause bearings in railway axleboxes to seize due to lubrication starvation. SKF created a new family of synthetic lubricants formulated to retain their lubrication viscosity even at these extreme temperatures. SKF knowledge enables manufacturers and end user customers to overcome the performance issues resulting from extreme temperatures, whether hot or cold. For example, SKF products are at work in diverse environments such as baking ovens and instant freezing in food processing plants.

Developing a cleaner cleaner

The electric motor and its bearings are the heart of many household appliances. SKF works closely with appliance manufacturers to improve their products' performance, cut costs, reduce weight, and reduce energy consumption. A recent example of this cooperation is a new generation of vacuum cleaners with substantially more suction. SKF knowledge in the area of small bearing technology is also applied to manufacturers of power tools and office equipment.

Maintaining a 350 km/h R&D lab

In addition to SKF's renowned research and development facilities in Europe and the United States, Formula One car racing provides a unique environment for SKF to push the limits of bearing technology. For over 60 years, SKF products, engineering and knowledge have helped make Scuderia Ferrari a formidable force in F1 racing. (The average racing Ferrari utilizes around 150 SKF components.) Lessons learned here are applied to the products we provide to automakers and the aftermarket worldwide.

Delivering Asset Efficiency Optimization

Through SKF Reliability Systems, SKF provides a comprehensive range of asset efficiency products and services, from condition monitoring hardware and software to maintenance strategies, engineering assistance and machine reliability programmes. To optimize efficiency and boost productivity, some industrial facilities opt for an Integrated Maintenance Solution, in which SKF delivers all services under one fixed-fee, performance-based contract.

Planning for sustainable growth

By their very nature, bearings make a positive contribution to the natural environment, enabling machinery to operate more efficiently, consume less power, and require less lubrication. By raising the performance bar for our own products, SKF is enabling a new generation of high-efficiency products and equipment. With an eye to the future and the world we will leave to our children, the SKF Group policy on environment, health and safety, as well as the manufacturing techniques, are planned and implemented to help protect and preserve the earth's limited natural resources. We remain committed to sustainable, environmentally responsible growth.
