FLENDER couplings

Standard couplings

Price list MD 10.1 P · 10/2014

The products and systems described in this price list are manufactured/distributed under application of a certified quality management system in accordance with DIN EN ISO 9001 (Certified Registration No. 01 100 000708). The certificate is recognized by all IQNet countries.

The prices are valid as of 1 October 2014.

Refer to the Industry Mall for current updates of this price list:

www.siemens.com/automation/mall

The products contained in this catalog can also be found in the Interactive Catalog CA 01.
Order No.:
E86060-D4001-A510-D4-7600 (DVD)

FLENDER Standard Couplings

Introduction

1

Detailed Information

You can always find all updated information, such as brochures, catalogs, and operating instructions in the Internet at www.siemens.com.

Scope

This price list applies to the FLENDER Standard Couplings as described in catalog MD 10.1 · 2014.

Means

The X.CAT NG product configurator considerably facilitates the selection of the correct coupling with the correct order number.

You can simply place your order via the Industry Mall of Siemens.

Use of the price list

The price list has been systematically compiled and the numbering of the chapters about the coupling series corresponds to that in catalog MD 10.1 · 2014. The respective types are arranged in the same sequence as in catalog MD 10.1.

For the respective types, the following has been stated on separate pages:

1. Price of the complete coupling and extra charge for finished bore as well as delivery times
2. Prices for individual coupling parts and wearing parts
3. Extra charges per coupling for:
 - Fine and micro-balancing of the coupling
 - ATEX design
 - Take off threat
 - Type-dependent extra charge (e.g. special rubber elements, axial play limiting device)
 - Prices for painting
4. Extra charges per coupling part for:
 - Fine and micro-balancing of component parts
 - Bore quality IT6
 - Tapered bore
 - Recess in the hub, hub spigot, hub shortening
 - Take off threat
 - Second keyway
 - Prices for painting

The following variations of finish-machining are made without extra charge:

- Bore diameter in inches
- Bore tolerance, position of tolerance zone not equal to H
- Width tolerance P9 for parallel keyway
- Geometry of parallel key according to ASME B17.1
- Balancing according to full parallel key standard

The extra charge for the finished bore comprises:

- Bore with tolerance grade IT7 and any position of tolerance zone (e.g. H, J, P)
- Parallel key according to DIN 6885 or ASME B17.1
- Axial securing

Bore diameters

The diameter of a finished bore is described by a nominal dimension and a tolerance class. The tolerance class is determined by the position of the tolerance zone described by a letter and a tolerance grade described by numerals.

Example: Ø100H7 mm nominal dimension = 100 mm

Tolerance class = H7

Position of tolerance zone = H

Tolerance grade = 7 = IT7

The tolerance classes are standardized according to ISO 286-1; the letters of the IT symbol stand for "International Tolerance".

The extra charge for the finished bore is independent of the position of the tolerance zone (e.g. H, J, and P).

It takes more time and expenditure to make a bore to a tighter tolerance grade. This is why tolerance grade IT6 (e.g. H6) is more expensive than the standard IT7 (e.g. H7).

Detailed information

You can derive more detailed information (e.g. technical data, selection and ordering data and special designs - in particular detailed descriptions and foot notes) from catalog MD 10.1.

Trademarks

All product designations may be trademarks or product names of Siemens AG or supplier companies whose use by third parties for their own purposes could violate the rights of the owners.

Change or cancellation

If the order is changed or cancelled, costs will be charged according to expenses incurred.

FLENDER Standard Couplings

Preservation and painting

2

Surface coat					
Preservation					
Preservative	Properties	Durability		Abbreviation	Extra charge in EUR
		Indoor storage	Outdoor storage		
Cleaning emulsion	Simple preservation	up to 6 months	–	Standard	–
Spray oil	Anti-corrosive agent	up to 12 months	up to 4 months	B31	0.–
Tectyl 846 or similar	Long-term preservative, wax-based	up to 36 months	up to 12 months	B28	0.–
Cleaning emulsion + VCI film ¹⁾	Active system, reusable	up to 5 years	up to 5 years	B34	0.–

Prices for paints depend on the series, type and size and are listed in the following chapters. The prices for paints are independent of the hue of the final coat.

The following paints are common; other paints on request.

Surface coating				
Painting				
Designation	Properties	Coating composition	Total thickness of layers	Abbreviation
Priming coat	For transport and short-time storage	Zinc phosphate flat paint	80 µm	B42
Finishing coat	Special corrosion preventive	Zinc phosphate flat paint PU finishing coat	160 µm	B43
Finishing coat highly resistant to chemicals	Highly resistant to chemicals	Zinc phosphate flat paint PU finishing coat HC	1600 µm	B44

Attention:

In explosive atmospheres, a maximum thickness of layer of 200 µm is allowed only.

Attention:

Today, most of the standard couplings are delivered without painting. Standard couplings should always only be painted if required by the customer. Please do not offer painting without the customer requiring it, since our order handling process and the spray-booth capacities are not suited for a significantly increased number of couplings to be painted. FLUDEX couplings are painted on request only.

¹⁾ VCI films protect against corrosion as export or long-term packaging. An expensive removal, e.g. of Tectyl 846, is not required. Parts, unsuitable for VCI film wrapping will be conserved with Tectyl.

FLENDER Standard Couplings

Inspection and certificates

3

Documentation, inspection documents and inspection

	Abbreviation	Extra charge in EUR
Operating instructions in the available languages		0.–
With certificate of compliance with the order acc. to DIN EN 10204-2.1 – Confirmation that the delivered products comply with the requirements of the order (drawing dimensions, balancing, material, etc.) without stating any test results.	D99	0.–
With test report acc. to DIN EN 10204-2.2 – Confirmation that the delivered products comply with the requirements of the order (chem. analysis, mechanical parameters) with stating results of non-specific tests.	D98	0.–
With inspection certificate acc. to DIN EN 10204-3.1 for leak test (K1 acc. to F7200)	E36	60.–
With inspection certificate acc. to DIN EN 10204-3.1 for fitting dimensions (K2 acc. to F7200)	E37	120.–
With inspection certificate acc. to DIN EN 10204-3.1 for balancing quality (K3 acc. to F7200)	E38	80.–
With inspection certificate acc. to DIN EN 10204-3.1 for surface crack detection (K4 acc. to F7200)	E39	on request
With inspection certificate acc. to DIN EN 10204-3.1/3.2 for ultrasonic examination (K5 acc. to F7200)	E40	on request
With inspection certificate acc. to DIN EN 10204-3.1 for measurement of thickness of layer (K6 acc. to F7200)	E41	80.–
With inspection certificate acc. to DIN EN 10204-3.1/3.2 for chemical analysis/mech. parameters (K7 acc. to F7200)	E42	on request
Inspection by classification society		on request

If operating instructions are to be translated according to order, they must be asked for.

All operating instructions can be downloaded as pdf-document at www.siemens.com.

Certificates of compliance with the order, test reports and inspection certificates are available as hardcopy or in electronic form.

For designs with different connection parts the width of LZ can be calculated with an average value.
The width of LZ of design XHY is the average of design XHX and design YHY.

Example: Calculation of LZ for size 105; S = 150 mm
 design:CHC: $LZ = 150 - 40 = 110$
 design:CHC: $LZ = 150 - 86 = 64$
 design:CHC: $LZ = (110 + 64) / 2 = 87$
